FOR IMMEDIATE RELEASE

SANITIMER® PUTS HOSPITAL STAFF ON THE CLOCK

Hand Washing Timer Ensures Bacteria Free Hands For Patient Safety

DALLAS, TX - This slick award winning device attaches easily to any standard hand washing sink faucet to ensure your healthcare staff rinse, lather and wash their hands for the full 20 seconds recommended by the Centers for Disease Control (CDC) and World Health Organization (WHO) to avoid the spread of harmful bacteria. The SaniTimer® automatically begins a 30-second countdown — the extra 10 seconds account for an individual's preferred hand-wash prep — shown on an easy-to-read LED display as soon as the water is turned on. There is no button to push or extra steps necessary for staff members to perform in order to utilize this aid. At the end of the cycle, the SaniTimer® beeps to alert the hand washing user and resets itself to 30 seconds for the next member. The device works with pedal sinks as well as hands-free sinks for ease of installment and operation with your existing system.

The SaniTimer® is a simple and straight forward, yet very effective tool in medical applications as statistics show that improper hand hygiene accounts for roughly 20,000 Hospital Acquired Infection (HAI) deaths annually. The truth is as infectious as the negative results of poor hand hygiene and your staff, patients, and guests should know that this is a priority for you in your facility.

Hand hygiene with soap and water is the only known effective way to kill spores such as **C.Difficile** and viral threats such as **Norovirus** as hand sanitizers are not fully effective against these threats. Hand hygiene with soap and water should be the first and most used means of proper hand hygiene over all else in a medical facility with the top factors of focus being on the friction and timing components. The SaniTimer® solves the issue of timing and coupled with proper hand hygiene technique & training offers the best and most cost effective means of stopping the spread of bacteria.

When it comes to quality control, clean hands should be at the top of the list and the SaniTimer® creates the means of forming a great habit in a professional setting which can save lives.
